

CLAIMS

1. Indicating device for at least one operating state of at least one other partial mechanism of a computer system (20) with at least one interface for communication with the computer system (20) and an optically perceptible display means (10; 30; 36, 38) for a preselected operating state.
2. Indicating device according to claim 1, characterized in that the display means (36) comprises at least one LED (12).
3. Indicating device according to claim 1, characterized in that the display means (38) comprises at least one play figure (10), whereof the position of a body part can be moved.
4. Indicating device according to one of the preceding claims, characterized in that the interface for communication with the computer system (20) is a USB connection.
5. Indicating device according to one of the preceding claims, characterized in that the interface for communication with the computer is a blue-tooth connection.
6. Indicating device according to claim 1, characterized in that the display means (10; 30; 36, 38) comprises an electric motor and rotary parts.
7. Indicating device according to claim 1, characterized in that the display means comprises an analog measuring instrument with a needle.
8. Indicating device according to one of the preceding claims, characterized in that the display means comprises a row with several seven-segment displays.
9. Indicating device according to claim 1, characterized in that the display means comprises a pump for a water flow in a room fountain.
10. Indicating device according to one of the preceding claims, characterized in that on said device is provided a selector switch for selecting a particular operating state to be displayed or a specific communication information.
